Cattela Fair Culture TestPurposemeasure cognitive skills devoid of sociocultural influence The Culture Fair Intelligence Test (CFIT) was created by Raymond Cattell in 1949 as an attempt to measure cognitive abilities devoid of socio-cultural and environmental influences. [1] The scholars later concluded that the attempt to build measures of cognitive abilities devoid of the influences of experiential and cultural conditioning is challenging. [2] Cattell proposed that general intelligence (g) comprises both fluid intelligence (Gf) and crystallized intelligence (Gc).[3] The Gf is biologically and constitutionally based, the Gc is the real level of the cognitive functioning of a person, based on the increase of Gf through sociocultural and experiential learning (including formal education).
